Interesting. We have not actually purchased Palantir yet, but will likely do so; partially because both the City and Cook County Sheriff have implemented it and there will be some cross-platform interoperability and cost-savings (potentially). I totally agree re: Palantir. I attended Chief Tracy's presentation with David Kennedy today on Custom Notifications; only about 20 people at most in attendance. Will brief you. He mentioned again how happy he was with our presentation and your SSL 3 work.

I met with that guy for breakfast this morning. It turned out he was actually quite pleasant after all. They are a company based in New Zealand that sells a lower cost alternative to Palantir. It sounds quite similar, so I guess it would not be of any interest to CPD, since you already have Palantir. They have not broken into the US market significantly - they mainly sell to Asia. Their applications are mainly around low-volume crimes, like financial crimes and organized crime, rather than things like burglaries.

The only slightly bad news is that they are trying to implement something like SSL within their link charting framework, but so far they are just beginning. He did not actually try to sell me anything, and did not express interest in meeting with you. I think he was more trying to learn about the state of our project and keep an eye on us. We agreed that we'd stay in touch in case there are future opportunities to collaborate in some way.

We had one point of agreement. He was very dismayed by the PredPol event. He said the product is very "rudimentary" and that he doesn't know of any other first-world country where the police chief could get up and do a sales pitch like the Atlanta guy did. He thought it was shameful.

dashboard computers

I opened the link, saw that this webinar is about the following, and thought you may be interested. FYI.

The Smart Policing Initiative will present a webinar on "Smart Policing Officers" on October 15, 2013 from 2:00 pm to 3:30 pm Eastern Time. Members of the Los Angeles SPI team will present this webinar, facilitated by Dr. Craig Uchida, the Los Angeles SPI research partner and BJA Visiting Fellow. This webinar focuses on the roles of police officers and crime analysts as they work together to reduce crime. Using data, information, and technology, officers and analysts work with captains and street officers to identify chronic offenders and chronic locations. Using this intelligence, captains are able to develop strategies and tactics to intervene appropriately. The webinar will describe the way in which police officers and analysts use data on a daily and weekly basis, how captains make decisions, and how technology (Palantir and the Omega Dashboard) assists in reducing and solving crime. The presentation will include brief demonstrations of this technology using 'live' data and results from the SPI program evaluation.

One thing that comes to mind is Palantir, which you've probably heard of. I saw a demo at Cook County Sheriff's Intel group and they love it. In fact, they're using CLEAR Arrest data, among other sources. I don't have any immediate funding to buy it. It's by definition an interoperability tool, since it allows multiple nodes and disparate data sources to be connected. We have a contract in place that only requires some minor modifications to use immediately. The tool could be a great asset in analytics support for violent crimes/ gun / gang crimes. Any sense of the funding opportunity, and timing? I'll tickle Chief Tracy with this...

Subject: Re: Info

Keep in mind that there are 100's of companies that have the exact same approach to social media. Even Palantir's social media solution, torch, is using the same approach.

Also, nobody has the fully automated social network analysis capability they we have. Everyone need to manually connect one node (person) at a time.

We can discuss this and more on Thursday or even tomorrow.

Cmdr Lewin,

Thanks for your feedback. It does sound like focusing on technology and logistics will be better use of everyone's time. Can we spend a few minutes prioritizing which use cases should go first? That will help to understand the scope and focus on related technology for these use cases.

Hema,

We can keep the first part of the meeting focused on the use case but due to budget meetings this week I won't be inviting too many end users-- we understand what the use cases will be, and if we ingest the right data sources the platform will support them. I think it's less about the use cases and more about the logistics of getting this going.

Or, alternatively, we can make the entire focus at Noon on the technology and logistics, which might be more beneficial since, like I said, we know the use cases.

Let me know your thoughts...

Thx
Jonathan

I could do Noon to 1PM for the non-tech and would have only 1/2 hr from 1P - 1:30P for tech, have to be at Law at 2PM.. or we can schedule a separate tech meeting another date (after Budget hearings of course).

Cmdr Lewin,

I agree. We will not have Janey attend the technical part of the discussion. I am suggesting that we split up the agenda between business (first 60 minutes) and then technical discussion (30 minutes).

Palantir is arriving on Tuesday. They are not available to meet on Monday. However, if you would like to keep the Tuesday meeting focused on business use cases, we can schedule another technical session at CPD for later in the day. Let me know which option will work the best for you and your team.

Thanks,
Hema

I met with that guy for breakfast this morning. It turned out he was actually quite pleasant after all. They are a company based in New Zealand that sells a lower cost alternative to Palantir. It sounds quite similar, so I guess it would not be of any interest to CPD, since you already have Palantir. They have not broken into the US market significantly - they mainly sell to Asia. Their applications are mainly around low-volume crimes, like financial crimes and organized crime, rather than things like burglaries.

The only slightly bad news is that they are trying to implement something like SSL within their link charting framework, but so far they are just beginning. He did not actually try to sell me anything, and did not express interest in meeting with you. I think he was more trying to learn about the state of our project and keep an eye on us. We agreed that we'd stay in touch in case there are future opportunities to collaborate in some way.

We had one point of agreement. He was very dismayed by the PredPol event. He said the product is very "rudimentary" and that he doesn't know of any other first-world country where the police chief could get up and do a sales pitch like the Atlanta guy did. He thought it was shameful.

Is Palantir something that could be useful for getting variables from unstructured data, along the lines of what SAS tried to do? I'm not familiar with it.
