I don't have a good gauge on your priority needs. Given their interest is due to the violence, I think anything that deals with guns would be viable. Maybe something related to the fusion center?

Subject: NIBRS
Readiness Assessment

In response to the request from CPD to conduct an assessment to determine the work effort and changes in the CPD records management systems that would be required if the CPD elects to participate in NIBRS, the project team made such an assessment and the report of our findings is contained in the attached document.

We believe this was a very successful and informative assessment. It was only possible because of the full participation and contribution that you offered to this project. We very much appreciate your support, hospitality, and engagement in this effort. This was

truly done in a spirit
of collaboration,
and it was a
pleasure to work
with you.

Jonathan... I would still like to get together with you on a couple of topics. One being access to the Mugshots. Below is the last communication we received, but after our discussion, I would think the pictures are part of the database we already have access too. Can you clarify?

The other one is to get an update on streamlining the process between CPD and the CBC.

Bob.

Bob,

The mug shot information we received in the past is this:

[REDACTED]

[REDACTED]

[REDACTED]

However we can't currently connect to that DB. Could we please get our servers [REDACTED] whitelisted for that DB? If possible it would also be great if we could receive [REDACTED] privileges for that server, though I suspect that this is a CPD box and thus not part of the NCC's subnet, am I right? Either way, who's our POC to get this done?

Thanks!

PS Yes, I would like to hear what you learned from the custom notifications presentation. Schuetz and Hollywood said that the CPD intervention was a mess, and it is unclear what was actually done. They have a high opinion of you and me, but a low opinion of the way we interact with the rest of the department, and the way they use the tools.

I met with that guy for breakfast this morning. It turned out he was actually quite pleasant after all. They are a company based in New Zealand that sells a lower cost alternative to Palantir. It sounds quite similar, so I guess it would not be of any interest to CPD, since you already have Palantir. They have not broken into the US market significantly - they mainly sell to Asia. Their applications are mainly around low-volume crimes, like financial crimes and organized crime, rather than things like burglaries.

The only slightly bad news is that they are trying to implement something like SSL within their link charting framework, but so far they are just beginning. He did not actually try to sell me anything, and did not express interest in meeting with you. I think he was more trying to learn about the state of our project and keep an eye on us. We agreed that we'd stay in touch in case there are future opportunities to collaborate in some way.

We had one point of agreement. He was very dismayed by the PredPol event. He said the product is very "rudimentary" and that he doesn't know of any other first-world country where the police chief could get up and do a sales pitch like the Atlanta guy did. He thought it was shameful.

Subject: RE: Call/ Meet

Hey Tom-

We're doing a news event in the new CPIC today to demonstrate the new
technology including radio interoperability, and I might ask if we can test
calling you on a Cook County Sheriff's frequency (I'm 9200, or may come
up as CPIC 1 or Chicago Police CPIC or something)... would you or
someone be available with a radio that has an appropriate frequency we
could dial up around 11A - Noon or so?

I'm at [REDACTED]

Thx
Jonathan

I think it's operationalizationosity. :)

But what say do you have over the operational side? Do you even know what they are doing exactly? With all their digging around, RAND was unable to find anybody who really could say what was being done.

I would like to get better informed about the operational side too, so I'm not working in a vacuum. I'm more likely to suggest good new concepts if I at least understood what they are doing. Right now I'm working off whatever I was able to pick up from Starsky & Hutch reruns.

City Hall?

Interesting. We have not actually purchased Palantir yet, but will likely do so; partially because both the City and Cook County Sheriff have implemented it and there will be some cross-platform interoperability and cost-savings (potentially). I totally agree re: Palantir. I attended Chief Tracy's presentation with David Kennedy today on Custom Notifications; only about 20 people at most in attendance. Will brief you. He mentioned again how happy he was with our presentation and your SSL 3 work.

I met with that guy for breakfast this morning. It turned out he was actually quite pleasant after all. They are a company based in New Zealand that sells a lower cost alternative to Palantir. It sounds quite similar, so I guess it would not be of any interest to CPD, since you already have Palantir. They have not broken into the US market significantly - they mainly sell to Asia. Their applications are mainly around low-volume crimes, like financial crimes and organized crime, rather than things like burglaries.

The only slightly bad news is that they are trying to implement something like SSL within their link charting framework, but so far they are just beginning. He did not actually try to sell me anything, and did not express interest in meeting with you. I think he was more trying to learn about the state of our project and keep an eye on us. We agreed that we'd stay in touch in case there are future opportunities to collaborate in some way.

We had one point of agreement. He was very dismayed by the PredPol event. He said the product is very "rudimentary" and that he doesn't know of any other first-world country where the police chief could get up and do a sales pitch like the Atlanta guy did. He thought it was shameful.

Sorry, yes, meant to include that. They will come to the parking lot right outside of Building 5 which is accessed off of 31st street just west of California. Post 7 is the number I believe, but its the first turn into a lot they can make after California. There should be parking and they'll come into the shorter of the two buildings there and follow the signs to the basement training room. I'll be in a seminar tomorrow, but you can feel free to give them Lt Jason O'Malley's contact number -- 312-771-5924.

Thanks much.

Good evening,

The following individuals have been scheduled this week for Palantir training at the Cook County Jail, South Campus, Building 5 (in the basement training room).

Tuesday May 20 (9:00am - 12:00pm) Intro Class no experience required: Lt. John E. Willner and Joe Candella,

Tuesday May 20 (1:00pm - 4:00pm) Intro Class no experience required: Albin Ahmetpahic, Dan O'Connell, and Colby Brown

Wednesday May 21 (2:00pm-5:00pm) Advanced Class previous 101 experience required: Dan O'Connell, Colby Brown, and Albin Ahmetpahic

Thursday May 22 (12:30pm-3:30pm) Advanced Class previous 101 experience required: Joe Candella and George Lewis

Please let me know if you would like me to send each individual on this list calendar invites directly. If so, please provide me with the appropriate email addresses, as to ensure they receive the correct information.

If you have any questions, please feel free to email me or call at 312-590-0849.

Thanks,
Brittney

Subject: Camera and Data Articles/ Oakland, we are mentioned

Data surveillance centers: Crime fighters or 'spy machines?'

By Thom Patterson, CNN
updated 12:56 PM EDT, Mon May 26, 2014 |

Data from video surveillance cameras is being used in surprising ways.

STORY HIGHLIGHTS

- Oakland, California, debates creating a one-stop shop for video/data surveillance
- Opponents fear the ability to track people with "the press of a button" will threaten civil liberties
- Central data surveillance poses serious privacy questions for millions around the globe
 - Operations in London, Boston, Rio have resulted in success stories

(CNN) -- Some residents of Oakland, California, fear their community is creating a monster.

The city calls it the Domain Awareness Center, but opponents call it a "spy machine" and a potential "tool of injustice."

Known as "the DAC," it's a proposed central surveillance facility where authorities can monitor the Port of Oakland and the city's airport to protect against potential terrorism.

But the broader issue of centralized data surveillance poses serious privacy questions for millions of people in cities around the globe.

In March, more than 100 worried Oakland residents waited past midnight to complain about it during a City Council meeting. Standing at the mic, Maya Shweiky, a self-described public school teacher and Muslim, warned lawmakers their proposal would be used to "discriminate against minorities and perpetuate racial, religious and political profiling."

While the council voted on the proposal, rowdy protesters began chanting, "No! No! No! No!"

Council members have proposed expanding the DAC to add live, 24/7 data streams from closed circuit traffic cameras, police license plate readers, gunshot detectors and other sources from all over the entire city of Oakland.

The danger, say opponents, is putting all these data resources into one place.

"If you need to go to four different locations to track someone's movements across town, you're not going to do it unless you have a good reason," said Linda Lye of the American Civil Liberties Union of Northern California. "But when you can do it with the press of a button because it's all at your fingertips, you'll end up doing it based on your idle curiosity." That, Lye said, creates a situation ripe for abuse.

Oakland represents just one battleground in a fiery debate about how cities should be using so-called "Big Data," especially aggregated video and other types of surveillance.

City closed-circuit TV cameras performed famously when they helped identify suspected terrorists in London in 2005 and in Boston last year.

Community surveillance 2.0

But the issue has progressed far beyond the power of a few hundred video cameras and streetlight posts. Community surveillance 2.0 is now all about huge data mash-ups and incredible software that quickly sorts through

mountains of information. Bottom line: A relatively small number of people have easy access to data that can track your whereabouts.

In many cities, cameras mounted on police patrol cars gather video of millions of license plates. That data that can be used to track vehicles, possibly yours. Add traffic cameras to the mix. Then include cameras at bus stops, airports and train stations. How about cameras owned by schools and private security companies?

The key to using all this information is the data-mining software that can easily and effectively rifle through it. Cities leading the way in video data collecting include London -- an early and strong adopter of widespread camera surveillance. The UK reportedly has 5.9 million CCTV cameras nationwide. For every 11 British citizens, there's one CCTV camera, according to Salon.

Nice, France, has been expanding its surveillance center, which is projected to eventually count one camera for every 500 residents.

As Rio de Janeiro hosts the World Cup and the 2016 Olympics, the city plans to make heavy use of its IBM-designed Operations Center, which combines video and other data from 30 agencies including traffic cameras, subways and even weather satellites.

The network includes more than 550 cameras, 400 employees and 60 different layers of data streamed from citywide sensors. Mayor Pedro Junqueira says the center helps emergency teams warn residents in landslide-prone areas when to evacuate during heavy rainstorms.

Police found an image of Boston bombing suspect Dzhokhar Tsarnaev on a convenience store surveillance camera. The center also takes credit for a rapid response to an emergency after a truck toppled a pedestrian bridge, blocking lanes on a major highway. Traffic was back to normal within nine hours.

Read more about Rio's Operations Center

In New York, a company called Placemeter is using feeds from hundreds of traffic video cameras to study 10 million pedestrian movements each day. It's using that data to help businesses learn how to market to pedestrian consumers. Placemeter also says it wants to use the data to help consumers with information such as when to visit your neighborhood coffee bar when the line is shorter. Placemeter says it doesn't store the video, nor does their analysis involve facial recognition.

Watch how Placemeter uses mindblowing technology to track pedestrians

Los Angeles Police use a game-changing data mining software program called Palantir that can claim the CIA as an early investor.

Watch how LA police use Big Data to fight crime

Lessons from Boston

Last year's Boston bombings investigation showed how fast police were able to sift through mountains of surveillance data. After London's terrorist attacks in 2005, it took thousands of investigators weeks to painstakingly analyze all the CCTV footage. Eight years later in Boston, the FBI was able to release blurry images of two suspects in just three days.

Read more about the pros and cons of security cameras

But the facial recognition data tools used in the Boston probe wasn't perfect. Images of the two suspects were available in public data bases, but the computers that searched that data missed them, CNN's Tom Foreman reported last year. Security analysts widely admit facial recognition technology is not yet good enough to spot a suspect in a crowd.

Read more about facial recognition tech

Studies trying to determine the crime-fighting effectiveness of cameras have been inconclusive. According to the Surveillance Studies Centre at Queen's University in Ontario, urban surveillance systems have not been proved to have any effect on deterring criminals. But a study from the U.S. Justice Department says it depends on the circumstances. Sometimes cameras can be a "potentially useful tool for preventing crimes" the study says, "when actively monitored."

Meanwhile, U.S. communities are taking steps to make their surveillance more robust.

-- **Chicago:** When the transit authority put more cameras in rail stations, crime went down, according to CNN affiliate WGN.

-- Dayton, Ohio: Police plan a new crime fighting strategy that includes 27 video cameras placed downtown, according to the Dayton Daily News.

-- Sacramento, California: The sheriff has asked homeowners and businesses to register their security cameras on the department's website. Investigators would contact camera owners located near crime scenes to search their video for potential evidence, according to CNN affiliate KCRA.

Even in tiny Chadbourne, North Carolina -- population about 2,000 -- CNN affiliate WECT reports they're talking about putting a camera down at the local Piggly Wiggly grocery store.

Cities looking for guidelines aimed at safeguarding surveillance centers from privacy abuses might look to The European Forum for Urban Security, which suggests putting systems into place that include mechanisms for transparency, independent oversight and accountability.

This is obviously an issue that is splitting the country.

Oakland Mayor Jean Quan, according to the San Francisco Chronicle

Privacy safeguards are being put in place in Menlo Park, California, where leaders recently passed a law requiring all data captured by automated license plate readers to be destroyed after six months unless it's part of an investigation.

The whole issue is "very explosive" and the Oakland City Council recognizes this, said the ACLU's Lye. At the March meeting, after so many residents expressed their concerns, the council voted to curtail the scope of the DAC, limiting surveillance to just the port and the airport. The vote was 5-4.

"There will be efforts in the future to expand the DAC to include city-based surveillance systems," Lye warned.

Oakland Mayor Jean Quan has promised to look into what privacy safeguards might be needed before trying again to expand the scope of the surveillance center.

Quan, who favors the DAC, told the San Francisco Chronicle: "This is obviously an issue that is splitting the country."
