**Subject:**    CCSO Palantir

Jonathan,

We would like to meet with you and discuss a partnership around Palantir. Currently we do not get any additional funding for this package, and we have to limit out usage accordingly. As you have some interest in the package and our environment, can we meet to discuss what next steps we can take?

Let me know if you are available Monday or Tuesday next week for a quick meeting.

Regards,

Bob.

**Subject:** Palantir at CPD
**Location:** OEMC, 1411 W. Madison St

**Start:** Tue 10/29/2013 12:00 PM
**End:** Tue 10/29/2013 1:30 PM
**Show Time As:** Tentative

**Recurrence:** (none)

**Meeting Status:** Not yet responded

**Organizer:** Sundaram, Hema

Agenda:
Noon – 1:00 p.m.

1. Review follow-up questions on the Palantir platform
2. Detailed business use cases/scope for CPD pilot
3. Priority of use cases

1 – 1:30 p.m.
    Technical discussion

Thanks,
Hema

FYI-- this is the County's Palantir data analytics environment. If the Superintendent approves, we would provide access to CPD's arrest photos. County will also be willing to give us access to the County Palantir environment for at least a few users while we work to build a CPD environment (if appropriate)...

Hi Scott,

I hope this note finds you well. We received your contact information from Jonathan Lewin and we work with Robert McInerney at Cook County — Palantir serves as the data analysis platform for CCSO.

We currently have access to the CPD Clear Incidents and Arrests database but have been in search of a connection to query for offender images for some time. Jonathan indicated that you could help us with the details necessary to access the images. Previously, we were told we could access the images a███████████████████1 — however it doesn't seem that we can access that server or database due to firewall restrictions.

Let us know if you have an additional way to access the images or can assist us in removing the firewall restriction. If you'd like to discuss via phone, just indicate an available time.

Kind regards,
Casey

**Subject:** wynyard

I met with that guy for breakfast this morning. It turned out he was actually quite pleasant after all. They are a company based in New Zealand that sells a lower cost alternative to Palantir. It sounds quite similar, so I guess it would not be of any interest to CPD, since you already have Palantir. They have not broken into the US market significantly - they mainly sell to Asia. Their applications are mainly around low-volume crimes, like financial crimes and organized crime, rather than things like burglaries.

The only slightly bad news is that they are trying to implement something like SSL within their link charting framework, but so far they are just beginning. He did not actually try to sell me anything, and did not express interest in meeting with you. I think he was more trying to learn about the state of our project and keep an eye on us. We agreed that we'd stay in touch in case there are future opportunities to collaborate in some way.

We had one point of agreement. He was very dismayed by the PredPol event. He said the product is very "rudimentary" and that he doesn't know of any other first-world country where the police chief could get up and do a sales pitch like the Atlanta guy did. He thought it was shameful.

Got it, then we can conclude it is a network issue.
Unfortunately I as the applications and database contractor have no access to assist with that.

You will need to be put in touch with Cook County and Chicago Police network engineers to set up another route and firewall opening between the two agencies.
Ask them to get you routed through to

Cook County's Morphotrack system should already have a route through to that so maybe that can be a good starting point for them.

Hi Scott,

1
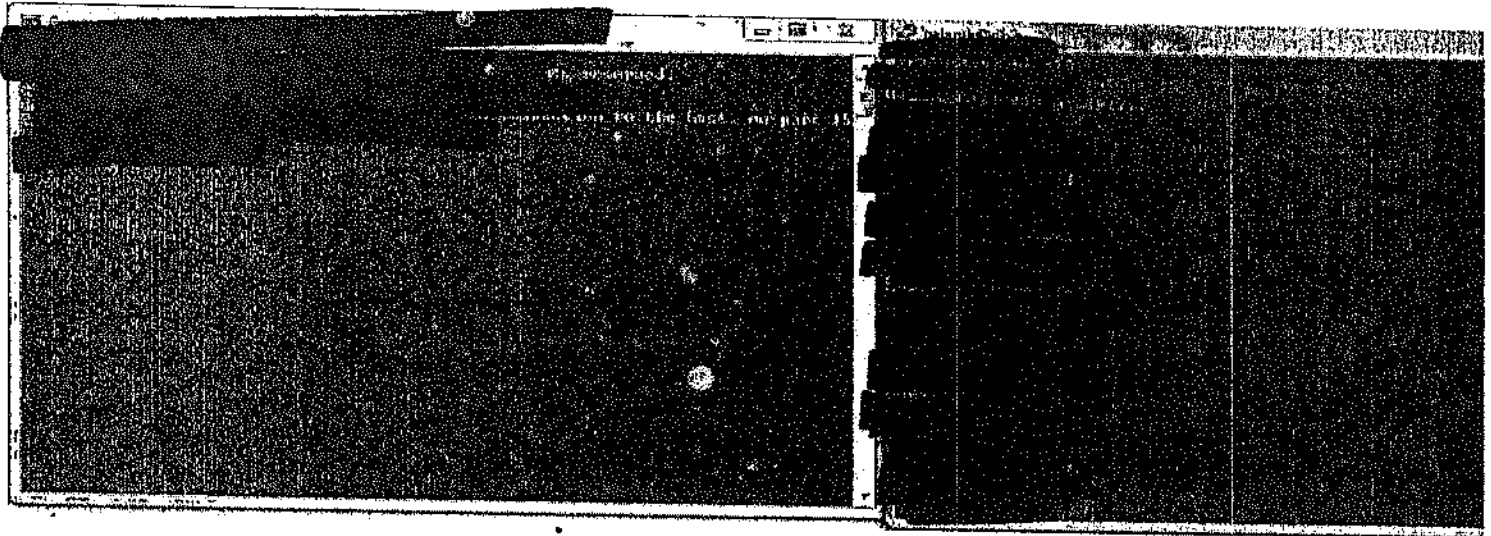

When connected via VPN, we have to tunnel through our servers normally – this is why there was no ip address in the hostname slot.

Casey

Sorry I had not responded earlier.

I thought we discussed on the phone that (according to notes from Morphotrack) you should be accessing the Mugshot Database server on IP address███████████
You said you would try a Telnet session to por███████his IP and if that timed out then we could conclude that this was the wrong IP address or that the routing is not in place.

Your screen shot below shows you forgot to insert an IP address in the Hostname slot ████████████████ there. As discussed, the value shown in my screen shot is the local IP address from within the Chicago Police network so don't use that one.

The ████████████ ddresses you have mentioned below are the ones you said you use to reach the CLEAR database server (a completely different machine) so those will definitely not work for mugshots. If you are reaching the CLEAR database listener, it does not recognize that service name so it will refuse connection.

Let me know how that goes.

Copying PSIT management to keep them in the loop as well.

**Subject:** RE: Mug Shots

Yes, we have approval to proceed with this. I'd also like to get five (5) users set up with access to Palantir so we can start using it-- can you assist with that? I'm copying Arba Houlden who will be the PM on the data-sharing effort for mug shots. Let me know how we can work on the Palantir access-- if that's possible. Thanx

Jonathan I hope all is well. I just wanted too touch base too see if we can work on the mug shots from CLEAR. If there is a time that is good for you please let me know. Also Tom Flemming should be reaching out for you regarding R-CASE. We want to get that Command level meeting on a calendar as soon as we can. Let me know.

Ha! Got it.

That rings a bell.

The DHSEM through me off. Any prep or dialog needed in advance?

**Subject:** RE: Palantir

Not really. There isn't anything to play with until the right data is integrated. What we talked about today was connecting you guys directly with Palantir so you can start your own conversations. They may have some kind of demo system you can play with.

Can we get some test accounts? Thx

FYI... this should be the ballpark.

Subject: RE: Vigilant Solutions

Commander Lewin,

Pricing for private LPR data:
Pricing estimates for access to the private data through LEARN is $150K annually. This is currently how you are accessing the data now in the demo.

Connecting additional LPR sources:
To connect additional LPR sources/servers into LEARN will be $6,000 (one time cost) / source. This cost can be waived if the LPR data is contributed to the NVLS data pool for all of law enforcement to use nationwide. The data will not be access by non-law enforcement.

To migrate external servers historical LPR data to LEARN varies on number of devices in the field and can vary from $1,500 - $500 / device (one time cost). This cost can be waived if there is a sizable hardware purchase made at the same time.

And finally there are ongoing costs associated for each device to cover enterprise LPR software, software updates and database optimization/maintenance. Cost is $160 / device annually.

Vigilant private LPR data API:
Access of private data through a third party analytic such as Palantir. Cost is $43K annually.

<u>Final Estimated Costs:</u>
Overall pricing breakdown based on Chicago PD police cars with 40 PIPs mobile LPR, 25 Vans with Genetec mobile LPR, and 100 fixed Genetec LPRs

LEARN - $150,000 (annually)
Competitive Integration of Servers - $18,000 (one time cost)
Historical Migration Costs - $82,500 (one time cost)
Basic Service Package for Competitive Systems - $26,400 (annually)
Estimated Total is $276,900
*Access of the data through a third party analytics like Palantir would be an additional $43,000 annually.

Please let me know if you need any other additional information.

Lt. Willner and Commander Lewin,

I trust you had a good holiday and a happy new year with your family. I thought I would check back now that it is a new year and see how things are going. I was going to be planning a trip to the Chicago area soon and was curious to know if you had some time to meet and discuss the progress of LEARN as well as what the possible next steps are? Also, while I
